

OSS Club Frontend Setup Guide (log file)

Events & Milestones Page – Using REACT.js

Prerequisites

- Node.js (v18+ recommended) [used (LTS) v22.20.0] [Download from [here](#)]
- npm (comes with Node.js)
- Git (for cloning and version control)
- VS Code or any modern code editor (VS Code preferred for using React JS)

Commented [RG1]: Checkout before performing all the below operations

Step 1: Clone the Repository

```
git clone https://github.com/rajghosh06-dev/oss-website.git
```

```
cd oss-website
```

```
git checkout events-timeline-section
```

Step 2: Set Up React Workspace with Vite (Select these while SETUP)

```
npm create vite@latest
```

- **Project name:** react-ui
- **Framework:** React
- **Variant:** JavaScript + React Compiler
- **Use rolldown-vite (Experimental)?:** No
- **Install with npm and start now?:** Yes

This creates a new folder react-ui/ inside your repo.

Step 3: Organize Folder Structure

Inside react-ui/src, create:

- components/events/
- components/milestones/
- data/

Then copy the following files:

◆ From events/:

- EventCard.jsx, EventsList.jsx, EventDetailsModal.jsx → components/events/
- EventsTimeline.jsx, EventsTimeline.css → components/events/
- eventsData.json → data/

◆ From milestones/:

- MilestonesTimeline.jsx, MilestonesTimeline.css → components/milestones/
 - milestonesData.json → data/
-

Step 4: Fix Import Paths

In EventsTimeline.jsx:

```
import events from '../data/eventsData.json';
```

In MilestonesTimeline.jsx:

```
import milestones from '../data/milestonesData.json';
```

Step 5: Wire Up App.jsx

Replace the default content with:

File: App.jsx

//code start

```
import './App.css';
```

```
import EventsTimeline from './components/events/EventsTimeline';
```

```
import MilestonesTimeline from './components/milestones/MilestonesTimeline';
```

```
import eventsData from './data/eventsData.json';
```

```
import milestonesData from './data/milestonesData.json';
```

```
function App() {
```

```
  return (
```

```
    <div className="app-container">
```

```
      <header>
```

```
        <h1>OSS Club Timeline</h1>
```

```
      </header>
```

```
      <section>
```

```
        <h2> Events</h2>
```

```
        <EventsTimeline events={eventsData} />
```

Commented [RG2]: Used emoji's for better visual there.

```
</section>
```

```
<section>
```

```
<h2>🏆 Milestones</h2>
```

```
<MilestonesTimeline milestones={milestonesData} />
```

```
</section>
```

```
</div>
```

```
);
```

```
}
```

```
export default App;
```

```
//code done
```

Commented [RG3]: Used emoji's for better visual there.

Step 6: Run the Dev Server (take a new terminal (within VS Code))

```
cd react-ui           //change your directory to react-ui
```

```
npm run dev           //to start the local server
```

Visit <http://localhost:5173> to view your live timeline.

Step 7: Commit and Push process

```
git add .
```

```
git commit -m "Set up modular React workspace with Events and Milestones timelines"
```

```
git push origin events-timeline-section
```

Notes

- All components are modular and scoped
- Data is loaded from JSON for easy updates
- Styling is handled via scoped CSS files
- Ready for routing, accessibility, and dynamic enhancements
